

“Method of Dispensing Medical Prescriptions”

ABSTRACT OF THE DISCLOSURE

5 The present invention provides a method of dispensing medical prescriptions that includes scanning the prescription at a location remote from a dispensary, and providing an electronic communication of the prescription to the dispensary, followed by delivery or patient pick up of the prescription medicine or prescription devices. The invention further provides a process for controlling a system of
10 processing medical prescription information that utilizes software that controls scanning of the prescription information and electronic communication of the prescription information to a dispensary. In both embodiments, the patient controls the steps in prescription filling, preferably including entry of the prescription information.
